Description

The Siamese Algae Eater (SAE) is a highly regarded freshwater fish known for its exceptional ability to control various types of algae, including the stubborn black beard algae. Native to Southeast Asia, particularly Thailand and the Mekong River basin, this species thrives is a favorite among aquarists for its diligent cleaning habits.

-Algae Control: Effectively consumes various algae types, including black beard algae, helping to maintain a clean aquarium environment.

-Active Swimmer: Enjoys exploring the tank, often seen grazing on surfaces.

-Diet: Omnivorous; feeds on algae, plant matter, and should be supplemented with high-quality sinking pellets and occasional protein-rich treats like bloodworms or brine shrimp.
