

Saki-Hikari Marine Herbivore 90g

Price: R215.00

Description

Includes a probiotic we call Hikari-Germ: This unique, live (viable), beneficial living micro-organism, in combination with the carefully selected ingredient mix, provides a highly digestible, extremely flavorful offering in a pellet that maintains its shape.

Scientifically formulated for herbivorous marine fish: A wide variety of plant origin ingredients including "nori" (dried seaweed), spirulina and seaweed meal rapidly attract herbivorous & omnivorous marine fish. These natural nutrient sources can be instrumental in helping your aquatic pet develop form and coloration like fish that just came off the reef.

A unique texture marine fish crave: Our proprietary processing allows us to make a rapidly hydrating, easy-to-swallow pellet that is ideal for fish feeding at all levels of the aquarium due to its slowly sinking characteristics.
