

Seachem CupriSorb 100ml

Price: R379.00

Short Description

Powerful adsorbent of copper and heavy metals Copper specific chelating resin Removes all types of copper. Size-100 ml

Description

Seachem CupriSorb is a powerful adsorbent of copper and heavy metals. Seachem CupriSorb will remove copper more rapidly and efficiently than carbon and is thus ideal for emergency copper removal. It extracts all types of copper from water and, if in continuous use, from the gravel/substrate bed as well. Seachem CupriSorb will allow maintenance of invertebrates in copper-treated tanks by removing copper leaching from substrates.

Competing products are not chelating products, but merely cation exchange resins. Such resins can remove copper from freshwater but are ineffective in saltwater.
