Availability: 2

Price: R260.00

Short Description
Antibacterial polymer for internal infections of fish Use alone or mixed with other medications to make them palatable to fish and greatly reduce the loss of medication to the water through diffusion Treats fungal and bacterial infections.

Description
Seachem Focus is an antibacterial polymer for internal infections of fish. It may be used alone or mixed with other medications to make them palatable to fish and greatly reduce the loss of medication to the water through diffusion. For use in freshwater or marine aquariums.

Types of Infections Seachem Focus Treats

Fungal & Bacterial

When to Use as a Medicated Food Mix - When your fish has a internal infection, Bloating, abnormal stools, loss of appetite, and weight loss.

Sometimes fish will develop several infections at the same time, requiring multiple medications. We don’t recommend dosing two medications into the water, but it is possible to put one medication in the food and the other in the water.

Using as a medicated food mix will help prevent damage to delicate plants or invertebrates.
