

Seachem PolyGuard 10g

Price: R260.00

Short Description

Treats bacterial, fungal, and parasitic diseases Very broad spectrum freshwater medication Good choice when unsure of the disease.

Description

Seachem PolyGuard is the single most effective medication to keep freshwater fish free of disease! It is an effective treatment and safeguard against all prevalent bacterial, fungal, and parasitic diseases of exotic fish. For use in freshwater or marine aquaria.

When our pets are sick, we immediately want to reach for the most powerful medication on the shelf. However, sometimes the right choice to prevent stress is to opt for a gentler medication at first, especially with less severe infections. PolyGuard is among Seachem's strongest medications, and is best used when you are unsure what disease you are treating or when the fish is suffering from multiple infections.

Seachem PolyGuard is appropriate for treating a variety of bacterial, fungal, and parasitic diseases of exotic fish. Below are some of the more common diseases treatable with Seachem PolyGuard. Be aware that many diseases and infections share similar physical and behavioral symptoms, e.g. clamped fins, lesions, loss of appetite, (Fin Rot, Ick, Fungus, Mouth Rot).

Types of Infections Treated with Seachem ParaGuard - Parasitic, Fungal & Bacterial.
