Description
Seachem SulfaPlex is an effective and safe treatment for many bacterial, fungal and protozoan infestations in the aquarium. While it can be used in both freshwater and saltwater, and is particularly effective against the common bacterial and fungal infections of freshwater fish. It is also among the gentler antibiotics, and great for treating fish that are already stressed. It is easily removed with carbon and does not impair nitrification.

Seachem SulfaPlex is appropriate for treating a variety of bacterial, fungal and protozoan infestations. Below are some of the more common diseases treatable with Seachem SulfaPlex. Be aware that many diseases and infections share similar physical and behavioral symptoms, e.g. clamped fins, lesions, loss of appetite. (Fin Rot, Mouth Rot, Fungus & Fur Coat Syndrome).

Types of Infections Treated with SulfaPlex - Parasitic, Fungal & Bacterial.
