Seachem Reef Complete 250ml

Availability: 2

Price: R243.00

Short Description
Liquid ionic calcium source 160,000 mg/L (most concentrated on the market) vs. 100,000 mg/L 100% soluble. Be wary of products that are milky white or need to be shaken.

Description
Seachem Reef Complete is a concentrated (160,000 mg/L) optimized blend of ionic calcium designed to restore and maintain calcium to levels found in natural seawater without affecting pH. Calcium and carbonates are essential to all coral growth. If either becomes deficient, coral growth will cease, followed by a rapid decline in coral health. To prevent this you must provide calcium (Seachem Reef Complete) & carbonates (Seachem Reef Builder or Reef Carbonate).

Seachem Reef Complete also includes magnesium and strontium in amounts proportionate to typical utilization ratios (100:5:0.1, Ca:Mg:Sr). This allows one to maintain these two important elements while maintaining calcium.

Seachem Reef Complete is a blended product. It is not simply calcium chloride. Commercially available calcium chloride contains ammonia. Unlike other ionic calcium supplements, Seachem Reef Complete is blended to a higher pH in order to force the ammonia to gas off into the atmosphere. In addition, Seachem Reef Complete is more concentrated than any other liquid product on the market. Seachem Reef Complete contains 160,000 ppm calcium. Our nearest competitor’s product is only 110,000 ppm

calcium.
