

Bala Shark

Call for Price: 011 826 5887

Description

The Bala Shark (*Balantiocheilos melanopterus*) is a popular freshwater fish known for its torpedo-shaped silver body and contrasting black-edged fins. Despite its name, it is not a true shark but gets its name from its shark-like appearance and energetic swimming style. They thrive in clean, well-oxygenated water. Bala Sharks are omnivores and do well on a varied diet of flakes, pellets, frozen foods, and plant matter.
