

Ammonia Stones Zeolite 700g

Price: R55.00

Short Description

Absorbs ammonia from your aquarium. 700g

Description

Zeolite or Ammonia Stones is a filter media that helps to remove ammonia from the ponds & aquariums.

Zeolite or Ammonia Stone can also help remove potentially harmful molecules.

Zeolite or Ammonia Stones provides a large surface area for nitrifying bacteria in filtration systems.

Zeolite or Ammonia Stones is a highly porous filtration media, used for removal and control of ammonia and rids the aquarium from ammonia.

Zeolite or Ammonia is a naturally occurring, highly-porous mineral that binds ammonia and heavy metals through an ion exchange mechanism.

Sold per 700g.
