AutoAqua Smart ATO Duo Auto Top-

Up

The SMART ATO Duo is a unique automatic osmolation system with two contactless digital sensors that control

and automate the filling of evaporated water.

AutoAqua Smart ATO DUO

The SMART ATO Duo is a unique automatic osmolation system with two non-contact digital sensors that

control and automate the filling of evaporated water.

The SMART ATO Duo is very easy to install on an aquarium.

The SMART ATO Duo uses QST for real-time protection against every situation. The QST can detect malfunction of the sensor, controller and empty tank to prevent the pump from running dry. The SMART ATO Duo gives an audible and visual warning at any time when it finds that a filling time is 6 times longer than the first filling.
