Pond Medic Anti-Chlorine 1L

Availability: 10

Price: R330.00

Description

ANTI-CHLORINE is an advanced water conditioner for freshwater ponds. Untreated tap water contains toxic chlorine and heavy metal substances that make it unsafe for all aquatic organisms. ANTI-CHLORINE rapidly conditions tap water by removing toxic chlorine and heavy metals such as Zinc and Copper whilst providing fish with a natural protective slime coating. This coating can be damaged during netting, spawning, injury, disease and other times of stress. ANTI-CHLORINE needs to be used whenever a water change is made and tap water is added to a pond containing aquatic organisms. Always treat water with this remedy to protect your fish and also use as a stress reliever.
COMPOSITION: Sodium hyposulphite in an aqueous solution, Natural polymers.
DIRECTIONS:
1. Calculate the volume of water in your pond. The volume can be determined by calculating the surface area (length X width) in meters and multiplying this figure by the average depth to obtain the volume in cubic meters. Multiply this figure by 1000 to obtain the volume in litres. E.g. Length X Width X Average Depth (in Meters) X 1000 = Litres
2. Fill a bucket with water and dose into bucket first.
3. SHAKE THE BOTTLE VIGOROUSLY BEFORE EVERY APPLICATION.
DOSAGE:
4. Add 1m per 40 fresh water. 10m per 400 fresh water.
5. Treat fresh water every time you do top-ups or water changes.
POISONOUS
* KEEP OUT OF REACH OF CHILDREN

* AVOID CONTACT WITH EYES, SKIN AND CLOTHING
