

Seachem Matrix 250ml

Price: R138.00

Short Description

250ml

Description

Seachem Matrix is a high porosity biomedium that provides efficient biofiltration for the removal of nitrogenous waste. Seachem Matrix is a porous inorganic solid about 10 mm in diameter. Each liter of Seachem Matrix provides as much surface as 170 liters of plastic balls! Plastic bio-materials provide only external surface area, whereas Seachem Matrix provides both external and internal macroporous surface area. These macropores are ideally sized for the support of nitrifying and denitrifying bacteria. This allows Seachem Matrix, unlike other forms of biomedium, to remove nitrate along with ammonia and nitrite, simultaneously and in the same filter.

Seachem Matrix is completely inert and will not breakdown. It need not be replaced. Since the majority of the bacteria are internal, Seachem Matrix may be rinsed when needed without damaging the filter. Seachem Matrix is compatible with all types of wet or wet-dry filters.
