Seachem Pristine 500ml

Availability: 2

Price: R643.00

Short Description
Natural organic waste management. Rapidly & safely eliminates sludge & detritus. Helps increase water clarity in Marine and freshwater. Size: 500ml

Description
Seachem Pristin uses bio-augmentation, a non-chemical and natural method, to improve water quality. It provides bacteria that break down excess food, waste and detritus in freshwater and marine systems. It will also reduce excess nutrients (e.g. ammonia, nitrates, and nitrites) that may fuel the growth of nuisance and disease-causing organisms. Seachem Pristine increases water clarity and promotes overall better health for the aquatic environment.

The bacteria species in Seachem Pristine can thrive in fresh or salt water and can utilize a wide range of organic compounds, including fats that can cause unsightly films. Unlike traditional nitrifying bacteria, this bacterial blend can adapt to harsh or low oxygen environments and continue to multiply and improve water conditions. Biopolymers produced by established bacterial colonies trap particulates and increase water clarity.

The species of bacteria in Seachm Pristine are a unique blend, specifically developed for hardiness and their ability to adapt to a wide variety of environmental conditions.
