Price: R307.00

Short Description
Reduces stress when handling or transporting fish Antiseptic for fish Promotes healing Marine and freshwater. 250ml

Description
Seachem StressGuard is the premium slime coat protection product. Seachem StressGuard will reduce stress and ammonia toxicity whenever handling or transporting ?sh. Seachem StressGuard binds to exposed protein in wounds to promote healing of injured ?sh and to reduce the likelihood of primary and secondary infections. Seachem StressGuard is compatible with all medications except those that are copper based. Seachem StressGuard is not amine based and will not interfere with Seachem Purigen. Seachem StressGuard does not coat resins or clog ?ltration like competing “slime coat” type products can.

What makes Seachem StressGuard very successful at healing is the fact that it contains protein active colloids. This protein active colloidal agent actively seeks out any wounds, abrasions, or places where exposed proteins are and attaches to this area to help directly deliver the disinfectant in the product and start the healing process. This protein active colloid, because it binds to the exposed proteins, also acts like a liquid bandage to the abrasion. Some products are marketed to be squirted in the bag when a fish is purchased. Those products are generally acidic, with some brands being a very strong acid. Putting such a product in a small, enclosed container with a fish often does more harm than any

intended good. Seachem StressGuard has a pH of 7.0. It will not affect the pH of an aquarium, even at large doses. There are no other products on the market that can compare to the effectiveness of Seachem StressGuard.

Size - 250ml
