Seachem Clarity 250ml

Availability: 2

Price: R290.00

Short Description
Water clarifier for marine and freshwater Clears all types of clouding Reef and plant safe. 250ml

Description
Seachem Clarity is the ultimate clarifier for both fresh and saltwater. It employs an advanced polymeric flocculating agent that is both reef and plant safe. Seachem Clarity is the only clarifier on the market that does it all! Seachem Claritywill clear all types of clouding.

Many companies manufacture multiple products to clear up each type of cloudiness and each different environment (e.g. freshwater, marine, reef, etc.). Some companies have developed products that will clear most types of cloudiness, but their application requires two separate bottles of product. Clarity contains compounds that will clear all types of cloudiness in all environments. Clarity contains both precipitating and flocculating agents in the same bottle, enabling all types of cloudiness to be removed in one dose.

Upon adding Seachem Clarity to the water, you will see a cloudy haze begin to form. This is normal and means that Seachem Clarity is beginning to work. The water is filled with tiny pieces of floating matter that were not visible to the naked eye. Seachem Clarity makes those pieces of matter begin to clump together. As they clump together they form larger pieces of matter that are now visible, hence the cloudiness. Once this matter has clumped together, it is a simple matter of mechanical filtration to remove the residue. Matter that was once too small to get caught in filter media is now in large enough clumps.

In order for Seachem Clarity to work effectively, you should have a filter with mechanical filtration (e.g., filter floss) connected to your aquarium.

Size - 250ml
