Description

Monitor Ammonia Level.

Test for 8 Water Parameters.

Quick, Simple, Accurate Reading.

Hygger test strips can be used in freshwater & saltwater aquariums and ponds.

Compared to liquid test kits, these testing pads are faster to results, less messy, one strip tests for 8 water parameters at one time.

The easiest way to monitor aquarium water parameters is by using the hygger aquarium water test kit, which is a one-touch water test strip. Instead of any clean-up and mess, just dip the test strip in the water, take it out, and read the result. With this fish water test kit, you can assess, diagnose, and remedy the problem without losing too many fish.

It can monitor ammonia level PH value and test for 8 water parameters to help improve

your aquarium world, quick, simple, accurate reading. This fish water test kit can be used in freshwater & saltwater aquariums and ponds.

The following can cause your results to be inaccurate

1. Exposure to moisture
2. Touching the pads with your fingers
3. Improper storage
