

Seachem Alert Combo

Price: R346.00

Short Description

Seachem sensor technology. Includes Seachem Ammonia Alert & Seachem pH Alert. Continuously monitors ammonia and freshwater pH. No chemicals or test procedures are required.

Description

The Seachem Alert Combo pack combines Seachem Ammonia Alert (1 card) and Seachem pH Alert (1 card). Seachem Ammonia Alert and Seachem pH Alert are almost half the size of competing products. At 1.5" x 2.5", they are small, clear, and unobtrusive, so they won't detract from the view of your aquarium. Simply place Seachem Ammonia Alert & Seachem pH Alert visibly anywhere in the aquarium or filter. It's that easy. No chemicals or test procedures are required.

Seachem Ammonia Alert's sensor changes reversibly from yellow to green to blue, relative to the ammonia concentration. It detects less than 0.05 mg/L (ppm) free ammonia and alerts you to the #1 killer before any sign of stress. The presence of the free ammonia is detectable continuously with a response time of about 15 minutes. Response to decreasing ammonia is slower, requiring about 4 hours to go from TOXIC to SAFE on removal of ammonia. Marine or freshwater use.

Seachem pH Alert is a unique color device designed to be placed in the aquarium or filter and monitor pH continuously. A sensor changes color reversibly from yellow to orange to

red alerting you to shifts in pH levels between 5.4 and 8.0. When first put in service, Seachem pH Alert response time will be about 30 minutes. Thereafter, pH shifts will register within ten minutes. Freshwater use only.
