Seachem SeaGel 250ml

Availability: 1

Price: R346.00

Short Description
Removes phosphate, silicate, organics, metals, acids & more. 50/50 blend of MatrixCarbon & PhosGuard. More convenient than two separate bags of media. 250ml

Description
Seachem SeaGel is a blend of Seachem & Seachem PhosGuard. Seachem MatrixCarbon is an ultracapacity carbon for the removal of organic and color impurities. Seachem PhosGuard is a powerful remover of phosphate, silicate, toxic metals, and acids. Both components are bead shaped for optimum water flow characteristics and penetration. The components enhance each other and are ideal for reef and marine use. Seachem SeaGel may also be used in freshwater that is not phosphate buffered.

Although Seachem MatrixCarbon has the lowest detectable leachable phosphate content of all major carbon brands tested, some phosphate is still released. Adding Seachem PhosGuard to the mix compensates for this. Both components are bead shaped for optimum water flow characteristics and penetration. The components enhance each other and are ideal for reef and marine use.

Size - 250ml
