Seachem Cupramine 500ml

Availability: 1

Price: R1,174.00

Short Description

Copper reatment for external parasites Active at low concentration (does not precipitate) Bound on amine so it is not as toxic to fish 100% Removable with carbon or Cuprisorb. 500ml

Description

Seachem Cupramine effectively eradicates Oodinium, Cryptocaryon, Amyloodinium, Ichthyophthirius, and other ectoparasites of both freshwater and marine fish. It is superior to copper sulfate, chloride & citrate: it is non-acidic, less toxic to fish, remains in solution, and does not contaminate the filter bed. It is superior to chelates: it is fully charged (ionic), active at low concentrations, and is removable with carbon.

There is more than a four-fold concentration gap between the minimal therapeutic dose (0.2 mg/L) and the toxic dose (0.8 mg/L). Seachem Cupramine is easily removable with chemical filtration. It is highly effective and safe in freshwater as well as marine water.

Types of Infections Treated - Parasitic

Size - 500ml
