Seachem Equilibrium 300g

Availability: 1

Price: R258.00

Short Description
estores and maintains mineral balance and GH Does not contain sodium or chloride like competing products Ideally suited for use with RO or DI water or any mineral deficient water. 300g

Description
Seachem Equilibrium is specifically designed to establish the ideal mineral content for the planted aquarium. Seachem Equilibrium contains no sodium or chloride (which can be detrimental to a planted aquarium at elevated levels). Seachem Equilibrium is ideally suited for use with RO (reverse osmosis) or DI (deionized) water or any mineral deficient water. Seachem Equilibrium raises the essential mineral/electrolyte content (General Hardness) of the water to balance with and promote stability of the carbonate hardness.

Unlike competing products, Seachem Equilibrium contains NO SODIUM CHLORIDE. Both sodium and chloride are not rapidly depleted elements in a planted aquarium, and, in the case of chloride, can do more harm than good. Competitors' products generally contain primarily sodium chloride (because it is inexpensive), which will raise the electrolyte levels for fish, but can be detrimental to plant growth. In addition, sodium is not a contributing cation to GH levels. Seachem Equilibrium contains only calcium, magnesium, and potassium salts, which aid in fish metabolism, but are also highly beneficial to plant growth.

Guaranteed Analysis

Soluble Potash (K20) 23.0%

Calcium (Ca) 8.06%

Magnesium (Mg) 2.41%

Iron (Fe) 0.11%

Manganese (Mn) 0.06%

Size - 300g
