Aquavitro Alpha 1L

Availability: 2

Price: R863.00

Description

A paramount factor in the proper maintenance of an aquarium is the dilution of accumulated waste by scheduled water changes. This requires the removal of chlorine or chloramine or both from the new water. With the advent of chloramine, thiosulfate has proven inadequate, causing the release of ammonia. At acid or neutral pH, this is not of serious consequence. However, at alkaline pH it can be devastating, particularly if the tap water is heavily treated with chloramines.

Aquavitro Alpha is a concentrated conditioner for saltwater. It is 50% more active than our Seachem Prime and 375% more active than the next closest competitor. Aquavitro Alpha removes chlorine, chloramine and ammonia. It converts ammonia into a safe, non-toxic form that is readily utilized by beneficial bacteria and reef inhabitants such as clams. Aquavitro Alpha may be used during tank cycling to alleviate ammonia/nitrite toxicity. Aquavitro Alpha detoxifies nitrite and nitrate, allowing the biofilter to more efficiently remove them. Aquavitro Alpha also promotes the production and regeneration of the natural slime coat on fish. Aquavitro Alpha is non-acidic and will not impact pH, nor will it over activate skimmers. Use at start-up and whenever adding or replacing water.
