

Boyd Chemiclean Red Cyanobacteria Algae Remover 2g

Price: R528.00

Description

Boyd – Chemiclean (2g)

Chemiclean helps to remove red, black, blue-green, and methane (bubble) producing cyanobacteria in a marine aquariums.

It's simple, quick and easy to use. Chemiclean works within 48 hours oxidizing trapped organic sludge and promotes an ideal enzyme balance. Chemiclean will clean stains from red cyanobacteria in aquariums.

Simple to Use Instructions:

Remove all chemical filtration (Chemi-pure, Chemi-pure Elite, carbon, etc.)

Turn off protein skimmer, ozonizer, uv sterilizer.

Use air pump with an airstone for upkeep of oxygen. THIS IS CRITICALLY IMPORTANT.

Add one scoop of Chemiclean per 10 gallons of aquarium water. It is imperative that you take into account water displacement of sand, rock and filter when dosing!

Successful treatment may take up to 48 hours. After the 48 hour treatment period, perform a 20% water change.

Turn on protein skimmer, ozonizer & uv sterilizer. Add back or replace Chemi-pure or carbon removed previously.

Repeat if necessary starting with step 1.

DO NOT OVERDOSE
