Dymax CO2 Indicator Solution 10ml

Availability: 2

Price: R134.00

Description

The Dymax co2 indicator solution 10ml is a liquid reagent that is used to measure the co2 levels in a planted aquarium. It is designed to work with the Dymax crystal co2 indicator, a glass device that changes colour according to the co2 concentration in the water. The solution is easy to use and comes in a 10ml bottle. To use it, you need to fill the indicator with 5 drops of the solution and place it inside the aquarium. The solution will react with the co2 in the water and change colour within 1-2 hours. The colour will indicate whether the co2 level is low (blue), optimal (green), or high (yellow).

The Dymax CO2 Indicator Solution (10ml) is a must-have for any aquascaping enthusiast. Designed to be used with CO2 drop checkers, this solution provides real-time monitoring of carbon dioxide levels in your planted aquarium. The color-changing formula helps you ensure optimal CO2 levels, promoting healthy plant growth and preventing algae blooms. Just add it to your drop checker and observe the color for accurate CO2 readings.
