

Hygger Transparency Digital Aquarium LCD Thermometer Small HG073-S

Price: R299.00

Description

The external aquarium thermometer adopts an advanced smart microchip and an aluminum alloy sensor, which can accurately measure the temperature of different types of water, such as freshwater and saltwater. It is suitable for monitoring the living temperature of fish, lizards, turtles, and other reptile tanks. The transparent screen prevents blocking the aquarium view.

The thermometer does not need to connect with a wire; it makes your setup look a lot neater and cleaner.

Press the 'SET' button to switch between Celsius and Fahrenheit.

The battery is placed on the front of the unit; no need to peel the thermometer off.

The Hygger HG073-S Transparent Digital Aquarium LCD Thermometer is a compact, easy-to-read solution for monitoring your tank's water temperature with precision. Designed with a clear, sleek display, this thermometer blends seamlessly with your aquarium glass without obstructing the view. Ideal for both freshwater and marine tanks, it provides accurate real-time readings in Celsius or Fahrenheit. Simply attach it to the outside of your tank with the included adhesive—no submersion required. A reliable tool to help ensure optimal conditions for your aquatic life.
