Description

The Double Tail Purplish Betta is a stunning freshwater fish prized for its dramatic split caudal fin and vibrant, iridescent shades of purple. This variety features a symmetrical tail that fans out gracefully, creating an elegant flow with every movement. The unique purplish hue gives it a regal and mystical appearance, making it a true centrepiece in any tank.

Although they can tolerate slightly cooler water, a heater is recommended—especially during colder seasons—for consistent health and vitality.

Feed your Double Tail Betta a protein-rich diet of high-quality betta pellets, frozen foods like bloodworms, and brine shrimp. To boost colour and immunity, add supplements such as garlic guard and Azoo Discus Vitamins. A varied diet helps maintain health and enhances their vivid colouration.
