

Aquadine Weekend Feeder

Price: R60.00

Description

Aquadine Weekend Feeder, when placed in your aquarium will dissolve slowly releasing small particles of food. One shell feeds 15 average size fish in a 50 to 60 litre aquarium for 2 to 4 days depending on the pH and water temperature.

The Aquadine Weekend Feeder is a convenient solution for feeding your fish when you're away for a few days. Designed to slowly dissolve over 2 to 4 days, this feeder block releases food gradually, providing a balanced diet to all tropical fish in your aquarium.

It is very important to use Aquadine Triple A Block (Ammonia & Acid Preventative) and Aquadine Pond/Aquarium Algae Block when using the Aquadine Weekend Feeder.
