Nemarid Fish Dewormer 50ml

Availability: 3

Price: R135.00

Description

Internal parasites (such as Nematodes) need to be controlled in your aquarium. Nemarid will assist in the eradication of these worms in your fish. Your fish will appear healthier, colours will be enhanced and growth will be accelerated.

Often bloat (abnormally fat fish) appears as a result of high levels of internal parasite infestation. Red Nematodes can sometimes be seen protruding from the anal vent of the fish. Deworm your fish once every three months.

Dampen flake, powder food or pellet food with Nemarid once a day for 3 days. Return to normal feed. Repeat after seven days

Bonus Tip for Optimal Results

For enhanced effectiveness, mix in Bio Elite Garlic Guard. This helps stimulate appetite, support fish health, and improve overall treatment success.

After 3 days, perform a 30% water change to maintain excellent water quality and ensure a healthy aquatic environment.
