Cichlid Fish Egg Incubator

Availability: 2

Price: R195.00

Description
Egg tumblers are frequently used by fish breeders.

The gentle rolling action created by these tumblers simulates the natural incubation process of the fish, allowing breeders to manually hatch and raise the fry successfully.

Cichlids Egg Tumbler Incubator ensures optimal hatching conditions for fish eggs with a non-toxic design and smooth water flow for best results.

Cichlids Egg Tumbler Incubator is used for hatching and raising fish eggs in a controlled aquatic environment.

Cichlids Fish Egg Incubator Tumbler Fish Eggs Hatchery Aquatic Pet Nursery Hatchery Aquarium Breeding Mouth-Brooding.

• Made of non-toxic plastic material, hatching for raising fish eggs

• Suction tube clamp is soft, easy to install, not easy to scratch the incubator director

• Mesh uniform and dense to ensure smooth flow of water and improve hatchability

• Biochemical cotton can avoid the impurities in the fish tank in the incubation chamber

• Hatching fish eggs, you need to use the same fish tank water, so that fish eggs adapt to the environment
