Daro PH Test Kit

Availability: 2

Price: R200.00

Description
TEST RANGE 6.2 - 7.4

Tests the acidity, alkalinity, or neutrality of aquarium water. To help ensure proper conditions for healthy fish.

One way to aid trouble-free fish keeping is to check that your aquarium water is not harmful to your fish, keeping ph at 7.0 (Neutral) for MOST(NOT ALL) fish.

Directions: Add two drops Bromthymol Blue to vial, then fill vial half full with water to be tested. Compare the colour to chart. Add Daro pH down to reduce the alkalinity or Daro pH up to increase the alkalinity.

Please note that this test kit is extremely beginner-friendly. While it does not test the full range of water parameters, it is still an excellent product and one that we use every single day in our store.
