

Bio Ceramic Tubes

Call for Price: 011 826 5887

Short Description

L-3cms W-3cms H-13cms (8 Per Pack)

Description

Made from a porous ceramic material, making them an excellent biological filter media. Due to their large size, they are ideal for sump tanks where an effective biological filter media is required.

Each tube has a very high surface area for denitrifying bacteria to colonise to reduce harmful ammonia and nitrite in your aquarium or pond. Large organic solids and decaying matter are degraded at a far greater speed than conventional biological filter media.

Suitable for freshwater, marine aquariums, & ponds.

This aquarium filter media serves mechanical filtration to catch fine particles and

biological filtration for raising good stuff.

Premium ceramic media covered with thousands of porous tiny holes provides large surface area for bio filtration as well as filter out sparkling clear water.

Aquarium media block effectively absorbs fish waste and debris, providing crystal clear water for fish to thrive.
