Availability: 2

Price: R324.00

Short Description

Epoxy adhesive for planted aquariums. Secures hardscapes. Use with rock and driftwood. Fully cures submerged or emerged within 24 hours.

Description

Seachem Flourish Epoxy Brown is two-part epoxy putty that can be used during hardscaping to secure materials such as rock and driftwood for more stable foundations in planted aquaria. It has a working time of 5 minutes and fully cures submerged or emerged within 24 hours. Seachem Flourish Epoxy Brown is ideal for working with stacks of rocks, where collapse could cause damage to plants or the aquarium itself. It is completely safe for aquarium inhabitants.

For sensitive skin, wear latex gloves. Cut off desired amount of Seachem Flourish Epoxy. Replace unused Seachem Flourish Epoxy into plastic storage tube. Remove film and knead Seachem Flourish Epoxy together until uniform color is achieved. Once mixed, Seachem Flourish Epoxy can be used to adhere driftwood or rock, either submerged or emerged. Press firmly around base or contact point of drfitwood or rock to insure Seachem Flourish Epoxy penetrates pores and surface grooves. Curing begins in about 5 minutes, hardening in about 15 minutes. Seachem Flourish Epoxy cures fully in 24 hours.
