Aquavitro Phosfiltrum 50g

Availability: 1

Price: R493.00

Short Description
Ultra high capacity (GFO) phosphate and silicate removal. Highest binding capacity of any phosphate remover per gram. Harder and less fragile than other GFO's. 50g

Description
Aquavitro Phosfiltrum is a specially formulated, high-density, granular ferric oxide (GFO). It will rapidly remove phosphates and silicates from both freshwater and saltwater and will not release them back into your aquarium. It is much harder and consequently much less fragile than other GFOs, so it will not break apart into fine particles in your tank. It has the highest binding capacity of any phosphate remover on the market, so it will last much longer before it needs to be replaced. Its distinctive dark brown color identifies it as the premier product in the industry.

Sizes: 50 g

We do not recommend, using Aquavitro Phosfiltrum in a media reactor as the tumbling action of a media reactor can cause this media to produce dust. It may be possible if you can turn the flow of the reactor down low enough that the media does not tumble, but in general, it is better to place the media in a bag in your filter.
