

Aquavitro Purfiltrum 100ml

Price: R386.00

Short Description

Ultra high capacity organic waste removal. Removes soluble and insoluble organic impurities from water 5 to 10 times faster and more completely than all other competing products. Regenerable. 100ml

Description

Aquavitro Purfiltrum is a unique macro-porous synthetic polymer that removes soluble and insoluble organic impurities from water 5 to 10 times faster and more completely than all other competing products. It is the highest capacity organic filtration resin on the market outperforming even Seachem Purigen, binding 10 to 15% more organic material. Aquavitro Purfiltrum controls ammonia, nitrites and nitrates by removing nitrogenous organic waste that would otherwise be converted into these harmful chemicals. Aquavitro Purfiltrum will not reduce the levels of trace elements, and it significantly raises redox. It polishes water to unparalleled clarity. Aquavitro Purfiltrum progressively darkens as it removes impurities, and is easily renewed by treating with bleach per recommended regeneration instructions. Aquavitro Purfiltrum is designed for both marine and freshwater use.

Sizes: 100 mL
