NTLABS AxoTonic 500g

Availability: 2

Price: R295.00

Description
When to use:

Award winning AxoTonic helps to reduce occurrence & supports recovery from fungal infections by creating the optimal water conditions for your Axolotl. It is a balanced salt mixture that adjusts the pH, KH, & GH of your tap water, or DI/RO water while also adding trace elements vital for Axolotl health.

AxoTonic should be added to your aquarium during set up and when adding fresh tap water i.e. during a water change.

Shake the bag thoroughly before use.

When adding to a new aquarium, fill with water and add the required dose directly to the aquarium. If the aquarium already contains an Axolotl, add this dose slowly over the course of 5 days to avoid stressing the Axolotl.

When completing a water change, calculate the volume of new water being added and mix the required dose to the new water. The required dose is only for the volume of new water being added. Do not dose for the full aquarium volume.

AxoSafe, AxoCure and AxoTonic were named best new indoor products at PATS 2024! Judges said: "There will be huge demand for this product. It’s well branded and is

excellent value for money. It’s a great addition to the range."
