Description
Bubble Magus Automatic Sump Filter Rollers - Effortless Filtration Without Filter Socks

The Bubble Magus ARF-Series G2 removes the need for filter socks. Water is fed into the internal chamber via the aquarium systems drain, and through the filter roll. When the water level rises in the chamber due to filter clogging the water level switch triggers the motor to wind on the filter roll to a new fresh piece. The water level will then drop repeating the process.

Bubble Magus Automatic Sump Filter Rollers are used for efficient water filtration in marine and freshwater aquariums, effectively removing suspended particles such as detritus, food, and organic waste without the need for traditional filter socks.

New Design

Smaller Foot Print

The filter is a high-efficiency water filtration system that effectively removes suspended

particles such as detritus, food, and organic waste from the water column

Use in marine aquariums, freshwater aquariums, and corals system
