

Large Synodontis Catfish

Call for Price: 011 826 5887

Description

The Large Synodontis Catfish is a fascinating bottom-dweller native to various river systems across Africa, particularly the Congo, Nile, and Niger basins. Known for their distinctive patterns, upside-down swimming behavior, and hardy nature, Synodontis species make excellent additions to freshwater aquariums.

These catfish are omnivorous scavengers and will thrive on a varied diet that includes sinking pellets, algae wafers, frozen or live foods like bloodworms and brine shrimp.

Many Synodontis species were first documented during 19th-century African river expeditions, with new species still being described today.

Low-maintenance, visually interesting, and full of personality, the Large Synodontis Catfish is a great choice for hobbyists seeking a hardy, exotic freshwater species.
