Description

Color Enhancing Diet So Good, Wild Discus Attack It!

Specifically developed for Discus, this premium diet meets their need for higher protein levels and supports their unique eating behavior. Discus are known to be finicky eaters, often taking in and spitting out food — which can cause mess. Hikari Discus Bio-Gold granules are designed to reduce waste while offering maximum palatability through natural flavor attractants. With perfectly balanced nutrition, this formula is so complete that Discus can be successfully bred without the need for additional supplemental foods.

Nutritional Excellence:

- Formulated with a perfect blend of proteins, essential amino acids, and vital vitamins & minerals

- Contains stabilized Vitamin C to support immune system health

- Delivers our highest protein level, comparable to live foods

- Promotes healthy and consistent growth rates

- Natural color-enhancing ingredients help bring out vibrant, defined coloration

Unique Granule Design:

- Porous granule softens immediately in water but retains its shape

- Reduces the mess caused by Discus' repeated spit-and-chew feeding routine

- Will not dissolve or cloud the water

- 100% free from parasites and bacteria commonly found in live food

Perfect for serious Discus keepers and breeders who demand the best in nutrition, cleanliness, and color enhancement.
