Hikari First Bites 10g

Availability: 4

Price: R60.00

Description

Hikari First Bites Provide any newborn fish the exacting nutritional balance they require dring the earliest developmental stages of their life. Rich in highly nutritious, freshly harvested ingredients including premium-selected fish meal which provides a superior protein source rich in amino acids.

Unique low-heat production process prevents dissipation of necessary vitamins, nutrients and amino-acids.

Expect rapid growth free of dietary deformities or deficiencies.

Helps fry develop superior disease resistance.

Great for livebearers such as guppies and egg layers.

Semi-Floating Food

Livebearers (ovoviviparous) can consume Hikari First Bites right after birth. Start feeding Hikari First Bites right before the yolk sack is fully consumed. Excess food or over feeding can cause water quality problems which may result in heightened stress or serious illness. Feeding less food to be sure none is left after the feeding period is preferred, not allowing uneaten food to settle to the bottom of your aquarium.
