Description

Hikari Lionhead has been scientifically developed to promote growth and the prominent lionhead shape of goldfish such as Ranchu, Orandaand Azumanishiki.

These lionhead goldfish have a rare and exquisite beauty which makes them the elite class of all goldfish. Belief that natural, live foods were indispensable in creating the desirable lionhead shape were rebuffed after our long and strenuous laboratory research. Hikari Lionhead has been developed to produce superior results, while eliminating the parasite and bacterial problems associated with feeding live foods.

FEATURES

- Sinking Pellet That Won't Cloud The Water
    - Won't dissolve over time
    - Requires more monitoring of amount fed
