## Price: R145.00

**Description**

A Scientific Diet For Smaller Marine Fish

Hikari Marine S provides smaller marine fishes with exacting nutrition while promoting superior form and coloration. For fish that look like they just came off the reef, feed Hikari Marine S.

Hikari Marine S is formulated to establish proper metabolism while maintaining good digestive system health. The digestive tract is where many bacterial and fungal diseases begin. Hikari Marine S will enhance the brilliant colors you bought your marine fish for, helping them look their best. Our oxygen barrier bag helps lock in the nutrition and provide you with the finest, non-frozen marine food available today!

Contains essential fatty acids DHA and EPA and necessary high-level proteins as part of the scientifically balanced nutrition.

When used as a daily diet you can expect vibrant coloration and desirable form as a result of the finely tuned nutrient mix.

The unique, slowly sinking pellet becomes sponge-like rapidly allowing fish at all levels of the aquarium ready access to the superior nutrition, natural texture and desirable taste.

Best of all it won't dissolve nor cloud your water. For fish that look like they just came

off the reef, use Hikari Marine S!

Beneficial Ingredients.

Chitosan to maintain good health in the digestive system.

Stabilized vitamin C to reduce stress and build resistance to diseases..

Shrimp Meal for excellent, natural coloration.

Nutritional Excellence.

High nutrient, vitamin and mineral levels

One of our highest protein levels, consistent with the foods your fish would eat on the reef.

Promotes unequalled form, health and brilliant colours.

Bio-Technology allows us to provide your fish with a nutritional package that will have them looking like they just came off the reef.

Small Pellet

Porous pellet immediately becomes soft & sponge-like, it's a texture your marine fish are accustomed to.

Will Not Dissolve Nor Cloud The Water.

Easily digested helping to reduce waste.
