Price: R237.00

Description

Hikari Sinking Carnivore Pellets is a Scientific Diet For Most Carnivores, Especially Cats, Sharks, Eels, Bichirs & Stingrays.

Hikari Sinking Carnivore Pellets is a Scientific Diet For Most Carnivores, Especially Cats, Sharks, Eels, Bichirs & Stingrays. Specially developed for bottom feeding carnivorous fish offering a nutrient mix comparable to live foods without the parasites or bacteria they normally contain. Developed after extensive study and analysis of the sense of sight, smell and taste of numerous carnivorous fish.

Specially developed for bottom-feeding carnivorous fish offering a nutrient mix comparable to live foods without the parasites or bacteria they normally contain.

Developed after extensive study and analysis of the sense of sight, smell, and taste of numerous carnivorous fish. The inclusion of key ingredients like DL-methionine and L-lysine allowed us to produce a food most bottom-feeding carnivores devour readily.

New advances in bio-technology helped us identify the highest grade of color-enhancing ingredients available today which support color retention in UV-deficient environments. Your fish will look their best year-round!

The highly digestible nutrient mix helps reduce waste and aquarium clouding, common with other sinking foods.

Rapidly becomes soft by absorbing water, yet retains its shape.
