

JBL Manado Natural Substrate

Call for Price: 011 826 5887

Description

Optimal plant care through porous structure and nutrient storage function: substrate for freshwater aquariums

Vigorous plant growth, prevents algae: effective settlement of beneficial soil bacteria and ideal root growth thanks to natural pore structure. Support for the filter. Crystal-clear water

Ideal for fish, invertebrates and plants: no unwanted pollutants released into the water. Round-shaped granule grains are gentle on sensitive barbels of bottom-dwellers

High storage capacity: the natural substrate absorbs the surplus nutrients and releases them when required
