

L091 Three Beacon Plecostomus

Call for Price: 011 826 5887

Description

The L091 Three Beacon Plecostomus (*Pseudacanthicus* sp.) is a highly sought-after freshwater pleco known for its dark body contrasted by three striking orange to red spots on its dorsal and caudal fins. Originating from the fast-flowing rivers of the Amazon Basin, this pleco prefers tanks with good current, oxygen-rich water, and plenty of hiding places like caves or driftwood.

Origin: Amazon River Basin, South America

Diet: Omnivorous – enjoys a mix of high-protein sinking pellets, algae wafers, occasional vegetables (like zucchini), and frozen foods such as bloodworms or shrimp.
