

Leopard Bush Fish

Call for Price: 011 826 5887

Description

The leopard bush fish (*Ctenopoma acutirostre*), also known as leopard bushfish, spotted ctenopoma, leopard ctenopoma, spotted climbing perch, spotted leaf fish, spotted cichlid or spotted bushfish, is a freshwater fish. It is a member of the Anabantidae family, which is part of a group popularly known as labyrinth fish (gouramies and relatives).

The Leopard Bush Fish, also known as the Spotted Climbing Perch, is a peaceful ambush predator native to slow-moving waters in Central Africa, especially the Congo Basin. With its striking leopard-like spots and stealthy hunting behavior, it makes a unique addition to one's aquarium.

* Max Size: 15 cm

* Native Region: Central Africa (Congo River Basin)

* Water Type: Freshwater

*Diet: Carnivorous – eats live/frozen food like bloodworms, brine shrimp, and small fish
