Short Description

Pangasius Catfish/Iridescent Shark Catfish

Description

The Blue Stripe Pangasius, also referred to as *Pangasius hypophthalmus*, is a striking freshwater fish known for its smooth silver-blue body and distinctive horizontal stripe running along its side. They are peaceful by nature. An omnivorous diet of floating pellets and frozen foods will ensure optimal health and growth. This species is excellent for hobbyists looking for an energetic show fish that brings life and movement to any tank.

The Blue Stripe Pangasius is indeed commonly known as the Iridescent Shark Catfish. Despite the name, it's not a true shark—it's a species of freshwater catfish (scientific name: *Pangasianodon hypophthalmus*), part of the Pangasiidae family.

The Blue Stripe Pangasius, also known as the Iridescent Shark Catfish (*Pangasianodon hypophthalmus*), is a captivating freshwater species native to the Mekong and Chao Phraya river basins in Southeast Asia, including countries like Vietnam, Thailand, Laos, and Cambodia.
